

"LENOX" HACK SAW FRAMES AND SAW BLADES - USA

"LENOX" brand saw blades and related tools are manufactured in USA by American Saw & Mfg. Company since 1917 with the best quality materials and world class technology. They are one of the best of its kind in the world for professionals. The most recent improvement that Lenox has made to its bi-metal manufacturing process is the patented technology called **Tuff Tooth™**. This innovative tooth design greatly reduces tooth strippage, especially when cutting tough materials like stainless steel. Using the latest computer design technology, the teeth were strategically made stronger where they were most likely to break, thus greatly increasing the strength of each individual tooth. Cutting performance of the Tuff Tooth™ blades dramatically increased, while creating a smoother feel, a faster cut, and a longer lasting blade.

Blade Construction

One Blade. Many Cuts.

Tuff Tooth™ : All

NO. S 85-1 "LENOX" BI-METAL HAND HACKSAW BLADE

Lenox bi-metal hand hacksaw blades with their Tuff Tooth™ design and tooth hardness of Rc 64-66 are very flexible, have shock resistant teeth, resist heat and are virtually unbreakable. These features make them ideal for cutting tough materials like stainless steel.
